

Figure 1: Kaplan-Meier survival plot showing the proportion of patients remaining in the study over time (days). The y-axis represents the proportion from 0.00 to 1.00. The x-axis represents time in days from 0 to 4000. Two curves are shown: a blue curve (control group) and an orange curve (intervention group). Both curves start at 1.00. The orange curve drops to approximately 0.85 at day 500 and remains there until day 2300. The blue curve drops to approximately 0.85 at day 500, then to approximately 0.72 at day 1500, and remains there until day 3300. The plot includes a legend indicating 'EFS P = 0.583'.

- Low CLK1 PSI
- High CLK1 PSI

## High CLK1 PSI
